

Falola Olufemi Adedeji

Full-Stack Engineer

Lagos, Nigeria | femi.deji0@gmail.com | +234 703 307 2843 | falola.is-a.dev | github.com/falola13 | linkedin.com/in/falola-olufemi

Working hours: WAT (UTC+1). Same working hours as Berlin, Paris, and Amsterdam — full overlap with European teams, and afternoons overlap with US Eastern.

SUMMARY

Full-stack engineer with five years shipping user-facing web and mobile products across fintech, edtech, and consumer SaaS. Frontend architecture in React, Next.js, and React Native; backend delivery in Supabase, PostgreSQL, Node.js, NestJS, and Go. At Finaive I work across the whole stack — schema migrations, edge functions, and the Next.js app — and built the interface for its AI shopping assistant. Also wrote a double-entry payments ledger built around idempotent retries, transactional outbox delivery, and overdraft protection under row-level locking. Have led a small frontend team and mentored three engineers. Statistics graduate now working in AI evaluation — labelled sets, per-class precision and recall, and regression gates that fail the build when quality drops — with an AWS generative AI certification in progress.

SKILLS

Languages	TypeScript, JavaScript, Go, Python
Frontend	React, Next.js, React Native, Redux Toolkit, React Query, Tailwind CSS
Backend	Node.js, NestJS, Supabase, Express, REST APIs
Data	PostgreSQL, MongoDB
Platform	AWS, Docker, Git, CI/CD
AI (learning)	Amazon Bedrock, RAG, Prompt engineering

EXPERIENCE

Full-Stack Engineer (Contract)

Oct 2025 - Present

RevStar Consulting | Tampa, FL

- Deliver features end to end across frontend and backend layers within a cross-functional consulting team of engineers, AI engineers, and product managers.
- Currently assigned to RevHero — continuing the frontend work started under a direct contract, after the engagement moved onto RevStar.
- Support integration, testing, and release activities to keep production deployments stable.

Frontend Engineer

Jun 2025 - Oct 2025

RevHero | Tampa, FL

- Led a ground-up UI redesign, introducing a responsive design system that improved usability and accessibility.
- Rebuilt the frontend on React, Next.js, and TypeScript — improving maintainability and cutting load times by over 25%.
- Partnered with product managers and UX designers to align the visual direction with user feedback and business goals.
- Engagement continued under RevStar Consulting from October 2025.

Lead Frontend Engineer

Jun 2024 - Sep 2025

Scholé Labs | Lagos, NG

- Set frontend development strategy, mentored 3 junior engineers, and enforced code-quality and performance standards.
- Spearheaded the core school management dashboard for administrators, teachers, and students — improving data retrieval time by 20%.

- Implemented state management with Redux Toolkit and React Query, reducing application re-renders by over 30%.

Frontend, then Full-Stack Engineer (Contract)

Jan 2024 - Present

Finaive | Lagos, NG / MD, USA | ~10 h/week

- Work across the full stack since July 2026 — Postgres schema, Supabase edge functions, and the Next.js app — shipping features including service requirements agreed before payment rather than after, buyer Trust Profile verification, and dashboard rails that adapt to how experienced a buyer is.
- Write and apply schema migrations paired with down-migrations, so changes ship with their rollback.
- Built the interface for the platform's AI shopping assistant: TrustScore-ranked sellers returned as cards inside the chat, and per-search credit billing that shows the balance, warns before a new search is charged, handles an insufficient balance, and tells the buyer when a failed search wasn't charged.
- Led frontend development from 2024 — secure transaction workflows, dispute and status tracking, the migration from Vite to the Next.js App Router, and complex UI and critical fixes on the React Native app.

Frontend Engineer (Contract)

Sep 2023 - Dec 2023

FridayApis | Remote

- Built and maintained SSR applications with Next.js for a developer-focused API platform, improving initial load performance and SEO.
- Integrated cryptocurrency, translation, and currency-exchange APIs with resilient data handling.

Freelance Web Developer

Aug 2021 - 2023

Self-employed | Remote

- Designed and built custom sites and applications for small businesses and personal brands.
- Owned the full lifecycle: requirements, client communication, timelines, and deployment.

PROJECTS

ledgerpay | Go, PostgreSQL, Docker, GitHub Actions | github.com/falola13/ledgerpay | ledgerpay-gold.vercel.app
Payments API built around a double-entry ledger: idempotent charge retries keyed on client tokens, a transactional outbox so no webhook is lost if the process dies mid-write, HMAC-signed delivery with retry and dead-letter handling, and overdraft protection enforced by row-level locking. Runs as five services under Docker Compose with CI on every push, plus a Next.js operations dashboard covered by Playwright tests.

dispute-triage | Python, Amazon Bedrock, pytest | github.com/falola13/dispute-triage
LLM classifier for payment disputes whose real subject is evaluation: 90 hand-written labelled cases across six categories, precision/recall/F1 implemented rather than imported, prompt versions scored against each other with a case-level diff, and a zero-cost keyword baseline that exercises the harness and its regression gate in CI on every push. Off-format answers count as wrong rather than being dropped, and paid runs estimate spend up front and refuse to exceed a cap. The strongest prompt reaches a perfect macro F1, reported as a saturated benchmark rather than a headline.

Data-plan purchasing with live payment flows | Reals SPV | React, Redux Toolkit, Payment gateways
Built the responsive web platform and integrated payment gateways alongside third-party data-vendor APIs. Focused on the unglamorous part that decides whether a payment product works: explicit transaction states, honest error surfaces, and feedback that tells the user exactly where their money is.

EDUCATION

B.Sc. Statistics, Federal University of Agriculture, Ogun State

2023

NCE, Computer Science / Mathematics, Federal College of Education, Ogun State

2017

CERTIFICATIONS

Generative AI certification, Amazon Web Services

In progress
